Education

Princeton University

B.Sc. in Computer Science

Princeton, NJ

Sep. 2019 - June 2023

- Relevant Coursework: Machine Learning, Statistics, Natural Language Processing, Blockchains, Algorithm Design, Server & Website Programming, Convex Optimisation, Computation Theory, Networks

Experience

The OpenAI Deployment Company

Forward Deployed Engineer

London, UK

September 2026 - Present

Northslope Technologies

Forward Deployed Engineer

London, UK

November 2025 - September 2026

- Acquired by OpenAI in September 2026 to form OpenAI Deploy Co.
- Deployed on-site to integrate technology solutions with client operations; collaborated with customer teams to understand requirements and deliver tailored technical solutions.

PRODA LTD

Full Stack Engineer

London, UK

June 2024 - November 2025

- Built and shipped a React/TypeScript/Redux web app used by 300+ active users; designed a Python/PostgreSQL backend and an in-house ML pipeline that processes and normalises 100+ financial documents/week.
- Re-architected relational DB schema, indexing, and permissioning, cutting worst-case query latency by up to 99% on tables with 1M+ rows.
- Optimised a PyTorch-based GNN for table structure detection and text-row classification in financial documents, reaching 98% accuracy.
- Led a 72-hour hackathon to build an LLM-powered data-validation system; won first place and had the solution officially adopted.

Mechanism Ventures

Startup Generalist

Miami, FL

Sep. 2023 - Feb. 2024

- Shaped marketing, advertising, and sales strategies for a nutritional-supplement subsidiary through A/B tests, lifting session length and funnel completion by 30%.
- Successfully launched a subscription-based POC in 5 weeks - validated by initial customer purchases and proof of revenue viability.
- Delivered impactful product features and interactive web interfaces using React.js, directly improving user engagement and conversion for startups with \$20M+ annual run rates.
- Designed a pipeline to generate creative assets and branding elements using OpenAI and MidJourney APIs in real time, allowing users to engineer prompts via survey inputs.

Projects

TigerMealX

Final-year Project

Princeton, NJ

Fall 2022

- Built a full-stack app using Python/Flask/React/SQLite/Docker for 3,000+ students to exchange meals, authenticate at dining halls, track balances, view real-time swap availability, and receive automated reminders.
- Migrated decades of legacy transaction and membership records into the new platform and implemented Auth0/Duo login authentication and campus-scanner API integration, ensuring zero-downtime data preservation and a seamless user experience.

Skills

Languages: TypeScript, Python, Java, C++, SQL, Golang

Technologies: Git, PyTorch, TensorFlow, AWS, React

Interests

Hobbies: Chess, Guitar, Piano, and Cooking

Rowing: German/U.S. national champion (11x), World Championship medallist (3x), European champion, Henley Royal Regatta semi-finalist
